AUDIO access: connect through your computer **OR** call in 1-855-767-1051 Conference ID: 48770017

Target Audience and Continuing Education Credit: VHA clinicians interested in movement disorders. Continuing education credits available for: physicians, PAs, RNs, NPs, and psychologists. **Accreditations:** ACCME, ANCC, APA. **You must complete on-line evaluation in TMS by Dec 13 to receive CEUs.**

Description: The purpose of this Microsoft Lync presentation is to discuss common rehabilitation practices used in the following movement disorders: essential tremor, dystonia and Parkinson's disease. Although helpful, medications for these movements disorder do not usually provide total symptomatic relief. With the help of rehabilitation and assistive devices, these symptoms can be further mitigated. We will discuss tools and strategies that are commonly used by physical therapists as well as assistive devices that clinicians can use in the clinic or at the bedside. Lastly, we will talk about newer, developing tools in rehabilitation research in Parkinson's disease. This knowledge based activity is one in a five part series on Movement Disorders for FY15.

Outcome Objectives: At the conclusion of this educational program, learners will be able to:

1. Define common rehabilitation practice and tools used for the following movement disorders: essential tremor, dystonia and Parkinson's diseases.
2. Describe common tools that can be used in the clinic.
3. Examine new and upcoming tools using advance technology for rehabilitation.
